

XL-8345

NON-TOXIC WATER SOLUBLE KNITTING OIL

XL-8345 is a clear, water-emulsifiable non-staining lubricant designed for positive, complete, and superior lubrication of needles, cams, and integrated components of modern high speed knitting machinery.

XL-8345 contains anti-static agents that prevent the build-up of static electricity on most fabrics. Static-free operation reduces thread breakage and increases productivity.

XL-8345 is formulated from highly refined water-white lubricating base stocks coupled with “state of the art” emulsifiers and surfactants resulting in a stable, crystal-clear fluid with excellent rinse ability requiring minimal scouring chemicals during subsequent dyeing and finishing operations.

XL-8345 is non-toxic, and will not cause adverse skin irritation from employees handling this lubricant.

XL-8345 is available in standard viscosity grades, and can be packaged in 20-litre pails, 205-litre drums, or semi-bulk 1100-litre totes.
